

TOOL // Looking At My Assessment

What is it used for?

This tool supports student self-assessment of their performance in a math assessment.

How do you use it?

The tool is attached to the students' summative assessment and they are asked to look over the assessment and reflect on their performance. This is to make the students more aware of how to improve by looking closely at their performance on an assessment rather than just the final mark. They need to identify; What they did well on, What they need to improve on and What specific steps they will take to improve on the next assessment.

How do you adapt it to other subjects and topics?

This can be used for any assessment.

A Look at My Assessment

The things I did really well:

Things I need to do better next time:

What I will do to improve for my next assessment:
